iLipo® Referral Form

Referral Done by - Minesh Patel, MD Kathy Newman, ARNP Heather Jennings, PA-C

- Normal diet and exercise programs are great in making you lose your overall body weight and fat. Their biggest drawback is that they are unable to target fat loss from any specific area that usually contains "stubborn unwanted fat" from those un-welcomed areas of your body. Through iLipo[®] we proudly present an innovative, 100% non-invasive, "fat melting" photo-bio-modulation technology that mimics body's natural process, triggering, stimulating, releasing, and emulsifying breaking down fat contents into fatty acids and glycerol molecules from those stubborn fatty areas without exercise.
- These molecules are now small enough to exit via our natural body drainage system called the lymphatic channels and be used as fuel by your body metabolism. Therefore it is recommended strongly to exercise following treatment in order to burn up the newly released energy derived directly from melting that unwanted fat in order to completely remove them from your body's fat storage. iLipo® also simultaneously maximizes body's lymphatic flow through lymphatic channels by stimulation specialized laser lymph node probes. This mostly produces gratifying visible results following the first treatment of 20 minutes. You can return to normal activity immediately after treatment.
- iLipo® has FDA clearance for "circumferential reduction". This is the first non-invasive procedure to get such clearance.
- This procedure doesn't reduce weight but will help reduce the circumference in certain stubborn fatty areas. The tests have show reduction of about 4cm (1.5- 2 inches) in stubborn fatty areas.
- The results are not guaranteed. Best results are seen if patients exercise right after the procedure.
- Certain people get better results than others.

8.

• Main side effects are skin irritation, redness and itching at the site of the laser placement.

This information has been clearly explained to me and I understand and consent to do the above procedure.
